## LIST OF CLAIMS / AMENDMENTS

Please amend claims 1-4, 6-7, 10, 18 and 24 as shown herein.

Claims 1 - 25 are pending and are listed following:

1. (Currently Amended) A method of providing localization of a web service, comprising:

receiving by a server an HTML page request via a network from a client web browser in a requester of the web service;

identifying by the server a culture associated with the received HTML page request by the server examining parameters embedded in the HTML page request to ~~identify~~ recognize culture identifiers; ~~(p7, lines 14-16)~~

identifying by the server a localization attribute and one or more values associated with the localization attribute in a requested page associated with the HTML page request;

determining by the server whether one of a plurality of satellite assemblies is associated with the identified localization culture;

referencing by the server the satellite assembly associated with the identified localization culture to locate content in the satellite assembly associated with each of the one or more values associated with the localization attribute, the satellite assembly being configured to provide the content prior to execution by ~~a~~ the server of a script embedded in the requested page;

replacing by the server the identified one or more values associated with the localization attribute in the requested page with the content associated with the each of the one or more values located in the referenced satellite assembly;

running by the server scripts embedded in the requested web page with the replaced identified values associated with the localization attribute in the requested page to provide a culture-dependent response; ~~(p9, line 17 – 19)~~ and

transmitting by the server via the network the requested web page containing the culture-dependent response to the client web browser in the requester of the web service.

2. (Currently Amended) The method as recited in claim 1, wherein the ~~localize~~ localization attribute further comprises the value "localize".

3. (Currently Amended) The method as recited in claim 1, wherein the identifying a culture associated with the received HTML page request further comprises identifying a culture parameter included with a page request, the culture parameter identifying a culture.

4. (Currently Amended) The method as recited in claim 1, wherein the identifying a culture associated with the received HTML page request further comprises identifying values unique to a culture in one or more headers associated with the page request.

5. (Original) The method as recited in claim 1, wherein the satellite assembly further comprises a dynamically linked library (DLL).

6. (Currently Amended) The method as recited in claim 1, wherein the content associated with the each of the one or more values located in the referenced satellite assembly ~~further~~ comprises content specific to the identified culture.

7. (Currently Amended) The method as recited in claim 1, wherein the determining whether one of a plurality of satellite assemblies is associated with the identified culture includes determining whether a satellite assembly associated with the identified culture is unavailable, and wherein the method further comprises referencing the satellite assembly associated with a default culture in the event that the satellite assembly associated with the identified culture is unavailable.

8. (Original) The method as recited in claim 7, wherein the default culture further comprises a culture that is predefined to be the default culture.

9. (Previously Presented) The method as recited in claim 7, wherein the default culture further comprises a culture that is a base culture of the identified culture, and wherein the identified culture being a culture that is derived from the base culture.

10. (Currently Amended) A computing-based system for providing localization of a web service, comprising:

a server ~~receiving~~ configured to receive a page request via a network from an agent;

a culture identification module in the server configured to identify a culture associated with the received page request by analyzing content embedded in the page request to ~~identify~~ recognize culture parameters;

a localization values parsing module configured to identify a localization attribute and values in a requested page associated with the received page request;

a key values parser configured to locate localized content associated with the localization attributes and localization values and to designate the localized content to replace content referenced by the localization attributes and localization values in the requested page;

a satellite assembly, selected using the culture identified by analyzing the received page request, that includes the localized content located by the key values parser, the satellite assembly providing the localized content to replace content on the requested page prior to a server executing a script containing the localized content embedded in the requested page; ~~and~~

wherein the localized content is associated with the identified culture and is utilized when the requested page is served to the agent making the page request; and

a transmission module configured to transmit to the agent via the network the requested web page containing the localized content.

11. (Previously Presented) The computing-based system as recited in claim 10, wherein the satellite assembly associated with the identified culture is further configured to utilize one or more Active Server Pages (ASP.NET) guidelines to locate the localized content.

12. (Previously Presented) The computing-based system as recited in claim 10, wherein the culture identification module is further configured to identify a culture associated with a page request by identifying a culture identified in a culture parameter contained in the page request.

13. (Previously Presented) The computing-based system as recited in claim 10, wherein the culture identification module is further configured to identify a culture associated with a page request by identifying values unique to a culture that are contained in one or more headers included in the page request.

14. (Previously Presented) The computing-based system as recited in claim 10, wherein the localization attribute further comprises the term "localize".

15. (Previously Presented) The computing-based system as recited in claim 10, wherein

the culture identification module is further configured to determine a default culture in the event that content supporting the identified culture cannot be accessed; and

the localized content utilized is associated with the default culture.

16. (Previously Presented) The computing-based system as recited in claim 15, wherein the default culture is a statically defined culture.

17. (Previously Presented) The computing-based system as recited in claim 15, wherein the default culture is determined to be a base culture of a specific culture that is derived from the base culture when the identified culture is the specific culture.

18. (Currently Amended) One or more computer-readable media containing computer-executable instructions that, when executed on a computer, perform ~~the following~~ steps comprising:

receiving by a server via a network an HTTP page request from a client for web content for a preferred culture;

identifying by the server the preferred culture by examining content embedded in the received HTTP page request;

determining by the server if localized web content corresponding to the preferred culture is available;

localizing by the server the web content for the preferred culture if localized web content is available for the preferred culture;

localizing with the server the web content for a default culture if localized web content is not available for the preferred culture, wherein at least one of localizing the web content for the preferred culture and localizing the web content for a default culture includes referencing one of a plurality of satellite assemblies, selected using the identified preferred culture from the page request, to provide a

localized content associated with at least one of the preferred culture and the default culture, the referenced satellite assembly being configured to replace the localized web content with non-localized web content on the requested page prior to the computer executing a script, said script being embedded in the requested page with the provided localized web content so that when the script is executed with provided localized web content, attributes of the requested page are known before being transmitted to the client;

executing by the server the script embedded within the requested page with the provided localized web content; and

delivering by the server the requested page with the executed script to the client via ~~a~~ the network.

19. (Original) The one or more computer-readable media recited in claim 18, further comprising determining the default culture to be a predefined default culture.

20. (Original) The one or more computer-readable media recited in claim 18, further comprising determining the default culture to be a base culture from which the preferred culture is derived.

21. (Original) The one or more computer-readable media recited in claim 18, wherein the determining if localized web content corresponding to the preferred culture is available further comprises determining if a satellite assembly associated with the preferred culture is accessible.

22. (Original) The one or more computer-readable media recited in claim 18, wherein the localizing the web content further comprises:

identifying a localization attribute included in the page request;

identifying key values and key attributes associated with the localization attribute; and

redirecting key values and key attributes to reference the localized web content.

23. (Original) The one or more computer-readable media recited in claim 22, wherein the localization attribute further comprises the term "localize".

24. (Currently Amended) The one or more computer-readable media recited in claim 18, wherein the examining content embedded in the HTTP page request comprises identifying headers embedded in the HTTP page request associated with a particular culture, identifying culture identifiers within the

headers, or examining the page request to identify culture parameters associated with the page request.

25. (Original) The one or more computer-readable media recited in claim 18, wherein the identifying a requested culture from the page request further comprises recognizing one or more culture-identifying values from one or more headers associated with the page request.
